

Hands-On Lab: Single Page Portfolio Website

Estimated time: 1 hr

In this project you will be creating a single page Portfolio website using HTML5, CSS & Javascript having the following sections:

- About Me
- Skills
- Projects
- Recommendations

Please use this following image as a point of reference to what the styled page should look like. After completing this Final project, you will be able to build a website having modern day UI & functionality to showcase your portfolio to interested persons/organizations.

Please ensure that you don't include any personal/sensitive information in the project that is submitted. You may personalize the project at a later point of time at your discretion.

Note: Please make sure you do all the steps in the right sequence. If the steps are not done in sequence, the output may not be as desired.

About Me Skills Pr

Hi, I'm Jane Doe! 🌈

I am a full stack developer with 2 years of experience in web development, focusing on back-end and presentation layers. I have worked on applications deployed on IBM Cloud. I am an avid user of IBM Watson services and have also worked on Watson Assistant, NLU, Sentiment analysis, and Data Services.

Skills

HTML

2 years experience

JavaScript

1.5 years experience

Java

.5 years experience

React

1 year exp

Node.js

1 years experience

CSS

2 years experience

Projects

Chatbot

- Developed a secure website integrated with chatbot for an automobile client using HTML, CSS, JavaScript

Sentiment Analyzer

- Developed and deployed a sentiment analyzer for the box reviews section of an eCommerce platform using NLP and machine learning models.

Fashion Website

- Created a styled multi-page website for a new player in the fashion industry and integrated it with a shop payment gateway

Recommendations

"Jane is a very quick learner and quickly grasps key concepts of Web development. She got a great attitude & she is an excellent team player. She has a curious mind and asks the right question. She takes initiative within a team and has potentials to lead the team."

"Working with Jane has been an awesome experience. She is highly knowledgeable and always goes the extra step to make sure everything is right. For any future projects that need her expertise I would definitely want to work with her again."

"I had worked at initial phase of one of my Web development resource who has extensive knowledge about the domain and can work well with any organisation!"

Saving Your Progress: How to Download Your Project

Understand Session-Based Storage: Keep in mind that our lab environments are session-based and do not retain data from previous sessions. Downloading your project ensures that your work is preserved.

Download Your Project: To avoid losing any progress, download your project by following these steps:

- Right-click on the project folder and locate the download button.
- Click the download button to save a copy of your project to your local machine.

Before ending your session, verify that all changes to your project are saved.

For visual guidance, refer to the attached screenshot below showing the download process.

Prework

Download and setup the project folder

1. Open a new terminal.

File Edit Selection View Go Run Terminal Help

SKILLS ... ⌂ ⓘ

> DATABASES

> BIG DATA

> CLOUD

> OTHER

New Terminal

Run Task...

Run Build Task

Run Test Task

Rerun Last Task

Show Running Tasks...

Restart Running Task...

Terminate Task...

Attach Task...

Configure Tasks...

2. Download the project folder in compressed/zipped format, using the following command.

```
wget https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDriverSkillsNetwork-CD0101EN-SkillsNetwork/labs/Project/Final_Proj
```

3. Unzip the file in the folder named `singlepagewebsite` by running the following command. This command will create a folder named `singlepagewebsite` and add all the unzipped files in it.

```
unzip finalproject_startercode.zip -d singlepagewebsite
```

4. The folder `singlepagewebsite` has the starter code for this project. You have to make changes to this code, as per the tasks listed below and take screenshots where specified and submit those screenshots, to complete the project. Take a look at the code in `index.html`.

5. Test the HTML page with a live server. Use live server to test the output of your tasks as you complete each task.

▼ Click here to view guidance for liver server preview

Right-click the file and click “Open with Live Server” which will show a notification with a port (5500) being available to use. Or click on “Go Live” in the bottom panel to start the same port.

Table of Contents

Portfolio Website

Skills Network

In this project you will be creating a single page Portfolio website using Javascript having the following sections:

- About Me
- Skills
- Projects
- Recommendations

Please use this following image as a point of reference to what the style like. After completing this Final project, you will be able to build a website UI & functionality to showcase your portfolio to interested persons/organizations.

Please ensure that you don't include any personal/sensitive information when you submit your project. Your code will be reviewed and graded based on the logic and functionality of the code submitted. You may personalize the project at a later point of time.

Note: Please make sure you do all the steps in the right sequence. If you skip any step or done in sequence, the output may not be as desired.

"I had worked initial phase of Web development resource who has about the domain organisation"

Leave a Recommendation

Creating the single page website

Task 1

- In index.html, replace the name given in the starter code **Jane Doe**, with your name in the Home section. You will see that the class is set to **profile_name** for this div.
- In style.css, go to the **profile_name** class. The codes for floating to the left and padding, have been provided in the starter code. Add a light colour of your choice and an appropriate font size. The sample page uses 30px.

- Save and test your web page with live server.
- Take a screenshot of the home section along with the profile name and save it as **profile_name.png**.

Task 2

- In the nav bar section, you would notice that the link to the **About Me** section has been given. Add the other 3 sections: Skills, Projects, Recommendations.
- The codes for this class (ie. **topmenu**) have been given in style.css. The **topmenu:hover** class has a styling to set the color to white. Add the following style attributes to **topmenu:hover**.

- a. The `font-weight` as **bolder**
- b. The `text-decoration` as underline

3. Save and test your web page with live server.
4. Take a screenshot of the home section along with the nav bar showing the hover effect as show in the sample image and save it as `nav_bar.png`.

Task 3

1. Modify the **About me** section with your name, a unique profile image (different from what is provided in the sample) and a text summary of yourself.

You may add text about a fictitious person instead of actually providing your personal information.

- ▼ Click here to learn how to upload an image:

1. Visit [Pixabay Image Search](#).
2. Find the image you want to upload and right-click on it and select the option to copy the image link.
3. Open a new terminal and navigate to the `singlēpagewebsitē` directory using the following command:

```
cd singlēpagewebsitē
```

4. Use the following command to download the image in the lab.

Replace <Image-address> with the link address you copied.

```
wget <Image-address>
```

5. Specify the image name in the `src` attribute of the image tag provided for profile.

Please refer to the attached screenshot below:

Hi, I'm Jane Doe! 🌟

I am a full stack developer with 2 years of experience in both application and presentation layers. I have worked on applications and microservices deployed on IBM Cloud. I am an avid user of IBM Watson Services and have worked on Watson Assistant, NLU, Sentiment analyzer to name a few.

2. Save and test your web page with live server.

3. Take a screenshot of the **About me** section as shown in the sample image and save it as `aboutme.png`.

Task 4

In the Skills section, 2 skills have been initially added.

1. Add 3 or more skills with appropriate logo and text.

2. Save and test your web page with live server.

3. Take a screenshot of the skills section as shown in the sample image and save it as `skills.png`.

Task 5

In the projects section, 3 projects with sample content have been given.

1. Please change the project headings and project details from the default ones to your own/fictitious details.

2. The class is set to `project-card`.

Projects

Chatbot

- Developed a secure website integrated with chatbot for an automobile client using HTML, CSS, JavaScript and IBM Watson Assistant

Sentiment Analyzer

- Developed and deployed a sentiment analyzer for the box reviews section of an eCommerce platform using IBM NLU

Fashion Website

- Created a styled multi-page website for a new player in the fashion industry and integrated it with a shopping cart, using stripe for payment gateway

3. Save and test your web page with live server.

4. Take a screenshot of the projects section as shown in the sample image and save it as `projects.png`.

Task 6

You will notice that 3 Recommendations with random sample text have been initially added.

- The class name has been set to `recommendation` in the provided code for all these.
- Add at least 3 fictitious recommendations (each of about 25-30 words) in place of these.

Recommendations

"Jane is a very quick learner and quickly grasps key concepts of Web development. She got a great attitude & she is an excellent team player. She has a curious mind and asks the right question. She takes initiative within a team and has potentials to lead the team. ..."

"Working with Jane has been an awesome experience. She is highly knowledgeable and always goes the extra step to make sure everything is right. For any future projects that need her expertise I would definitely want to work with her again. ..."

"I had worked along with Jane during the initial phase of our venture which needed Web development. She is a committed resource who has in depth knowledge about the domain. She will be an asset for any organisation!"

3. Save and test your web page with live server.

4. Take a screenshot of the projects section as shown in the sample image and save it as `recommendations.png`.

Task 7

- The function `addRecommendation()` has been in `script.js` as a part of the starter code. A `onClick` event to the button with id `recommend_btn` in provided in `index.html`, to invoke this function.
- Enter a text and click on the button, for the function should be invoked. The text should be added to the list of recommendations, as shown in the image.

Recommendations

"Jane is a very quick learner and quickly grasps key concepts of Web development. She got a great attitude & she is an excellent team player. She has a curious mind and asks the right question. She takes initiative within a team and has potentials to lead the team. ..."

"Working with Jane has been an awesome experience. She is highly knowledgeable and always goes the extra step to make sure everything is right. For any future projects that need her expertise I would definitely want to work with her again. ..."

"I had worked along with Jane during the initial phase of our venture which needed Web development. She is a committed resource who has in depth knowledge about the domain. She will be an asset for any organisation!"

"Jane is a great person to work with. She is very knowledgeable in Front-end development. ..."

3. Save and test your web page with live server.

4. Take a screenshot of the updated recommendation section as shown in the sample image and save it as `new_recommendation.png`.

Task 8

- Home icon has been provided to you in the started code. Look for the portion `` in `index.html` and add the following code inside it to make it functional and to take you to the start of the page when you click on the home icon.

```
<svg xmlns="http://www.w3.org/2000/svg" fill="none" viewBox="0 0 24 24" stroke-width="1.5" stroke="white" width="63px">
  <path stroke-linecap="round" stroke-linejoin="round" d="M15 11.251-3-3m0 0l-3 3m3-3v7.5M21 12a9 9 0 11-18 0 9 9 0 0118 0z" />
</svg>
```

Leave a Recommendation

Name (Optional)

Message

Submit

2. Save and test your web page with live server.
3. Take a screenshot of the bottom of the page as shown in the sample image and save it as `home_icon.png`.

Task 9

In Task 7, you must have noticed that a newly submitted recommendation does get added to the existing list, however there is no confirmation upon submission. Your final task will be to incorporate that.

**Notice that the function `showPopup()` has already been provided with complete code in `script.js`. **

1. Add the following code inside the `addRecommendation()` function in the space provided, so that the `showPopup()` function is invoked only when a recommendation is submitted.

```
showPopup(true);
```

2. Go to div with id `popup` and add an appropriate text confirmation message in the space provided.

"Jane is a very quick learner and quickly grasps key concepts of Web development. She got a great attitude & she is an excellent team player. She has a curious mind and asks the right question. She takes initiative within a team and has potentials to lead the team."

"Working with Jane has been an awesome experience. She is highly knowledgeable and always goes the extra step to make sure everything is right. For any future projects that need her expertise I would definitely want to work with her again."

"I had worked along with Jane during the initial phase of our venture which needed Web development. She is a committed resource who has in depth knowledge about the domain. She will be an asset for any organisation!"

Thanks for leaving a recommendation!

Ok

3. Save and test your web page with live server.
4. Take a screenshot of the bottom of the popup message as shown in the sample image and save it as `popup.png`.

Checklist for submission

1. You have a screenshot of your name appearing as the stylized profile name in the file `profile_name.png`.
2. You have a screenshot of the navigation menu with the mouse over one of the items reflecting the hover effect in the file `nav_bar.png`.

3. You have a screenshot of the **About Me** section with your name/fictitious name, a personalized image (fictitious image) and text (fictitious text) in the file `aboutme.png`.
4. You have a screenshot of the **Skills** section with five or more skills with appropriate icon and text in the file `skills.png`.
5. You have a screenshot of the **Project** section with 3 or more fictitious projects appearing in stylized list in the file `projects.png`.
6. You have a screenshot of the **Recommendations** section with 3 or more fictitious recommendations appearing in stylized tiles in the file `recommendations.png`.
7. You have a screenshot of the **New Recommendations** added as another tile to the existing ones on click of the button, in the file `new_recommendation.png`.
8. You have a screenshot showing the **Home** icon with the appropriate image in `home_icon.png`.
9. You have a screenshot showing the **popup** with the appropriate message when a new recommendation is submitted in the file `popup.png`.

Congratulations! That's a wrap.
